Results from my dissertation, *Psychic Hacking: Using Remote Viewing to Steal Computer Data,* were presented with accompanying slides at the 42nd Society for Scientific Exploration's conference.

The raw data and Works Cited underpinning the presentation can be found in the dissertation, which is downloadable in PDF format from psychicexperiment.org.

The conference presentation also relied on additional references that were added after the dissertation was published.

Those additional references are listed below and arranged by subject. My ideas for how the references might be applied to the topic of remote viewing are included in parentheses:
